FLUORODIVE KIT SETS

Science has discovered corals contain Fluorescent Proteins invisible to the naked eye that jump into view using innovative high-intensity fluorolights and filters.
Bigblue Fluorodive Kits provide everything you need to experience this incredibly beautiful effect. You get specially designed filters to precisely match the coral fluorescence wavelength, and yellow blue-barrier filters to increase the intensity of the colors emitted by the corals. Our innovative design is the only one that allows you to easily switch between blue and white light to accommodate changes in dive conditions.
These kits are suitable for night divers, resorts, science institutions, ecological monitoring groups and specialty photographers.
Truly there is nothing that can match the beauty of witnessing coral fluorescence on your next night dive!
CAMERA FILTERS
Camera filters are available for you to capture the macro or wide angle photos or videos of the memorable aquatic creatures.
